PROFILE

Software Engineering student at Universidad Veracruzana. I have built desktop and web applications: exam simulators in C#/.NET delivered to an external client, a solo-built reservation system in JavaScript and Firebase, and team projects using Java/JavaFX, React and microservices. My work focuses on user interfaces, data access layers and testing. I am looking to join a professional development team.

CLIENT WORK

EXANI-I and USICAMM Exam Simulators | Freelance Developer 2025

Centro de Formación Juan de Zumárraga, Perote, Mexico · Client project · C#, .NET Framework, WPF, MVVM

- Gathered requirements with the client and single-handedly built two desktop apps, still in use at the center, to practice the EXANI-I university admission exam (113 questions, 4 modules) and the USICAMM teacher admission exam (91 questions).
- Implemented a global timer, automatic grading with feedback and three question types (multiple choice, true/false, matching) using MVVM and a JSON question bank.

PROJECTS

Descuke — Reservation and Tab Management System | Solo project 2026

Working prototype for a nightclub · JavaScript (ES Modules), Firebase (Firestore, Auth, Hosting)

- Built a web app with four roles (admin, promoter, host and waiter) to book tables by date on an interactive SVG floor plan, including arrival tracking and table blocking.
- Implemented tab opening through per-table QR codes, orders backed by a product and promotions catalog, and shareable reservation images generated on the client.
- Organized the code into layered modules (services, views, access rules) and documented root causes and fixes for reported issues.

SGPP — Internship Management System | Team academic project 2026

Java 21, JavaFX (FXML/CSS), JDBC, MySQL, JUnit 5, UML/ICONIX

- Built part of the data access layer: DAOs, interfaces and DTOs over MySQL using JDBC, plus custom exceptions for duplicate entries, referential integrity and validation.
- Wrote the DAO test suite with JUnit 5, supported by test data builders and a database cleanup script.
- Designed the application theme with JavaFX CSS, refactored the FXML views and produced UML documentation following ICONIX.

Propify — Real Estate Platform | Team academic project 2026

React, Vite, CSS · FastAPI microservices backend with Docker

- Redesigned the React frontend around a token-based CSS design system: responsive navigation, property listing and detail pages, authentication screens and reusable components (alerts, modals, cards).

Pasadena — Music Streaming Platform | Frontend, team project 2025

C#, .NET MAUI (XAML) · FastAPI, Go, PostgreSQL, MongoDB and Docker microservices backend

- Built the client views in .NET MAUI: home screen, profile and profile editing, a social page to follow users, playlists, and an admin panel for users and songs.

TECHNICAL SKILLS

Languages: Java, C#, JavaScript, SQL, HTML and CSS

Frontend and desktop: React, JavaFX (FXML/CSS), WPF and .NET MAUI (XAML)

Backend and data: JDBC, MySQL, Firebase (Firestore, Auth, Hosting), Node.js/Express, REST APIs

Tools and practices: Git/GitHub, JUnit 5, Jest, Docker Compose, DAO pattern, MVVM, UML/ICONIX, AI-assisted coding (Claude)

EDUCATION AND AVAILABILITY

B.S. in Software Engineering (in progress) — Universidad Veracruzana, Xalapa, Mexico Expected graduation: Dec 2027

Languages: Spanish (native) · English (intermediate)

Availability: Part-time, 20–25 hours per week | Remote from Mexico (UTC−6)
